## Fresh water monitoring action plan

The **CAMERAS** monitoring co-ordination group have approved the freshwater monitoring action plan (MAP). The key aims of the MAP are to:

1. identify monitoring requirements for understanding the biggest challenges facing Scotland's freshwaters;
2. develop a process to co-ordinate and streamline monitoring and;
3. maximise efficiencies, so rationalising the overall cost of monitoring to Scotland.

The MAP identifies a series of actions to be taken by the relevant organisations, to improve our understanding of the freshwater environment, and increase monitoring efficiencies. You can read more in the [freshwater MAP](#).
